An Approachable Family Owned Builder

Kansas City, MO – For the past five generations the Homoly family has been utilizing innovative technologies and time-honored methods to bring dreams to life. While many builders are closing their doors or cutting back personnel, Homoly Construction has increased gross sales more than 300% in the last 3 years. Andrew Homoly attributes this growth to the high standard his father set decades ago...and continuing to live up to those standards every day. “At Homoly we do the right thing for our clients every time. Sometimes it costs us additional time and money, but in the end we can go to bed at night knowing we lived up to our promise.”

Doing the “right thing” naturally led to **Green Building**. Andrew is LEED AP Certified and a Certified Green Professional with the NAHB (National Association of Home Builders). Homoly Construction is currently building a LEED Platinum Home in Leawood, a LEED Silver Commercial Remodel in North Kansas City, and a NAHB Green Gold home in Prairie Village. “It just makes sense to build Green.” states Andy, “The initial costs are so miniscule these days and Green Building Techniques are becoming far superior to traditional

methods. Not only are you doing the right thing for the environment, you are getting a much stronger home or building.”

High level building and Homoly Construction go hand in hand. Andrew is a licensed engineer and stays on the cutting edge of construction & Green technology. Homoly Construction specializes in high-end custom homes, commercial construction, and large remodeling projects. Design Build services are available as well as traditional Design Bid.
